"Your Garden Favorites"

OUR slogan "Your Garden Favorites" is most truly said, for one needs but glance through this interesting and instructive booklet to find therein listed practically all of the old fashioned garden favorites and the more recent introductions of the leading producers in American and Foreign sources throughout the entire horticultural world.

Do you know that the American Seed Trade Association appoints judges who determine which are the most worthy introductions in flowers and vegetables produced each year by these world-wide growers, and that they are tried in open field competition by tests made in twelve various parts of America? The outstanding sorts in these tests are called the "All America Winners." To the most worthy are given Gold Medals, Awards of Merit, and Special Mention in such order as their degree of merit has been judged.

For Identification: We have indicated the "All America Winners" of the past few years, showing in abbreviation the awards won and the year the award was made. We have further indicated, similarly, the awards given to world-wide winners by the Royal Horticultural Society of Great Britain, for your consideration and selection. The completeness of our offerings concludes with the best of standard sorts that have persisted because of their continued superior merit. Such strains have been rogued and improved to a state of highest perfection.

Beautiful Lawns, by Burnett Seedsmen

Formula No.1 Lawn Grass Seed Mixture

It requires no more effort to sow the best grass seed mixture than it does a poorer grade, and it is less expensive when you consider its permanence which eliminates constant resowing. Formula No. 1, **the balanced mixture**, is composed of several of the choicest, recleaned dwarf and spreading grasses, each serving its specific purpose; the **quick growing** biennials which act as nurse crops to the **slower germinating more permanent** sorts which reach maximum maturity only after 2 or 3 years; the **spreading varieties** which fill in bare spots left vacant by the disappearing (after a few seasons) biennial grasses, and the natural **drought resistant** varieties. Formula No. 1 will produce a fine, deep velvety green, close turf which will lend a tone of intimacy to the palatial mansion or the humblest dwelling. It completes the landscape. Lb. 65c; 5 lbs. \$3.00; 25 lbs. \$14.00; 100 lbs. \$55.00.

Special Lawn Grass Seed Mixture

You sow and sow, and sow, when, providing the proper mixture, one sowing should be sufficient. With our **Special Lawn Grass Seed Mixture** you can sow a lawn with complete assurance of immediate results within 5 to 7 days which will become more beautiful with the ensuing months. Accurately compounded to include biennial and perennial, choice, recleaned grasses of highest germination. It contains no fillers; one pound will sow 200 square feet of surface. Lb. 60c; 5 lbs. \$2.75; 20 lbs. \$10.00; 100 lbs. \$47.50.

Shady Place Lawn Grass Seed Mixture

Certain grasses, like certain flowers, revel and flourish in the shade. By including sufficient quantities of the shade loving grasses along with commodious amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. It is well to add lime before sowing. Lb. 70c; 5 lbs. \$3.25; 20 lbs. \$12.50; 100 lbs. \$60.00.

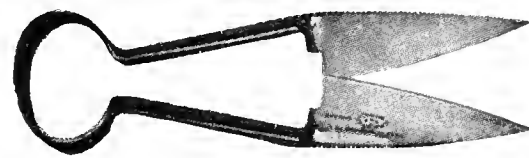

Sow 100 lbs. per acre, 1 lb. to 200 square feet for new lawns; half the quantity for renovating.

GERMINATING PERENNIALS BY FREEZING

Certain species of perennials require freezing before germinating, such as Trollius, Dictamnus, Primulas, Perennial Phlox and Lilies. **A quick method:** Half fill ice-cube tray of refrigerator with water; place the seeds in compartments; freeze; then fill pan to top and freeze for several days. Then thaw out and sow in usual way.

TO SPROUT

SLOW GERMINATING SEEDS

Certain flower species require 30 days to a year to germinate. After sowing seeds in flat or pan, cover to 4 times its thickness, water thoroughly, mulch with peat moss, place in shaded spot outdoors, with good circulation of air, during Spring, Summer and Fall; water sufficiently to prevent drying out. During Winter, move to sheltered spot near house or cold-frame and cover with leaves; eventually they will sprout, then transplant.

MEADOW FESCUE (Elatior pratensis). Fast growing, highly nutritive, broad leaved, tall grass, splendidly suited only for permanent pastures or meadows; at its best after 3 years.

10 lbs. \$3.25; 100 lbs. \$30.00

POA GRASSES

CANADA BLUE GRASS (Compressa). Spreads by creeping under ground rootstocks. Recommended over Kentucky Blue for lawns where the soils are poor, clayey or hard. Requires two seasons to reach full maturity; blue-green blades. Heat and cold resistant, also rough wear. For lawns and fairways.

1 lb. 45c; 10 lbs. \$4.00; 100 lbs. \$37.50

KENTUCKY BLUE (Pratensis). Has spreading underground rootstocks. Providing soils are rich, moist, alkaline, clayey, it produces our best lawns, improving each year; at its best after 2 or 3 years. Water at approach of dry seasons, not tolerant of droughts; avoid mowing during this period. Also suited to pasture.

1 lb. 45c; 10 lbs. \$4.25; 100 lbs. \$40.00

ROUGH STALK MEADOW GRASS (Trivialis). For shaded lawns it is our No. 1 grass. Otherwise identical with Kentucky Blue in characteristics and requirements.

1 lb. 60c; 10 lbs. \$5.75; 100 lbs. \$55.00

WOOD MEADOW GRASS (Nemoralis). A shade loving grass, but not as well suited to our states as Rough Stalk Meadow. Recommended for lawns under trees. 1 lb. \$1.60; 10 lbs. \$15.00.

LEGUME CULTURE (Seed Inoculation)

Jelly. All legumes—clovers, alfalfa, beans, peas, vetch, soybeans, cowpeas, etc.—will yield far better crops if seed is inoculated with **Legume Culture**, and a heavy deposit of nitrogen will be left in the soil for the benefit of succeeding crops by the nodules formed on their roots.

The Fashion Parade of the Garden

NEW CREATIONS . BEAUTY . COLOR TINTS

Novelties form the fashion parade of the garden; a pageantry of new beauty, grace and individuality; a revelation of new color tints—larger, double flowers—sweeter fragrance—longer stems—taller, dwarfer, hardier, more vigorous plants—earlier flowering. These improved characteristics mean greater adaptability. They mark the advance of progress in plant perfection.

"ALL AMERICA SELECTIONS" are the choice of the Nation's leading horticultural judges, as being the most worthy new varieties introduced each year. They include species from around the World, imported and planted in twelve different localities in the United States, from whence they are judged. Their recommendations are authentic and dependable; your safeguard against ambiguous creations or claims. Novelties within our garden walls intrigue us, for they tax our keenest anxiety in expectation of unrevealed new beauties—and we proud ourselves of keeping in with the modern touch.

Asters a (Wilt Resistant)

Need no introduction, but what is **Wilt Resistant** Aster Seed? It's a strain of seed produced from plants that were grown in heavily wilt-infested soil. It is reasonable to infer that if a strain was able to grow to full maturity and bear seed, it's genera or offspring must likewise be immune to wilt. Don't take chances, sow **Wilt Resistant** Strain Asters wherever possible.

Stately flowers admired by all. Specimen flower spikes are produced from deep, well drained and enriched soils, two parts soil, one *leaf mold, one sharp sand. Sow from Aug. to Sept. or early Spring in shallow drills in well moistened soil, in coldframes; cover with straw and shaded sash. Transplant once before setting out, 24 in. apart (dig hole 24 in. deep), fill bottom 12 in. with rotted manure, set crowns 2 in. deep, spread roots and firm, sprinkle a little lime. When growing, water occasionally. Stalks cut down after blooming in June will flower again later; keep seed pods cut off. To prevent slugs and snails, cover crowns in Fall with sharp cinder ashes. Best to thin established clumps to 3 or 4 canes when 4 in. high. Weak liquid manure application benefits flowers, spike length and color. Plant in groups of three; 48 in. to 80 in.

Broccoli

Easier to grow than Cauliflower.

No other table green has captured the appetites of a Nation more than Broccoli, and why not? Its delicious fine flavor is appetizingly pleasing even to children, yet rich in iron; more easily digested and is of easier culture. Set plants 18 in. apart in rows and 24 in. between; when the center flowers form, cut with about 7 in. of stem; this will be followed later by several smaller heads. No fuss in tying up, like in cauliflower.

Fifty Day Sprouting

Just think of it—you can pick "Fifty Day Sprouting Broccoli" in 40 to 50 days after transplanting, in certain localities; 50 to 60 in others. It is unquestionably the earliest in cultivation, yet may be used for late sowing (up to July). The heads are large, deep green, the texture extra fine and tender, the taste superb. It is a sprouting type, producing many lateral heads after the center head is cut; being a great heat resister, it will not burst into flower. Seeds of this superlative variety were imported direct from the grower in Italy.

Pkt. 25c; ¼ oz. \$1.50; oz. \$4.00

Propageno Calabrese

This is a sprouting Broccoli of the Calabrese type; second early. The introducer claims for it the largest head in its class, an achievement climaxing years of careful breeding and selection. Pkt. 25c

Insecticides

Time was when individual cures were required for each insect or disease. Discovery has given us Pyrethrum and Rotenone, two non-poisonous ingredients which kill both sucking and chewing insects; the insects, breathing through their bodies, inhale the vapors that paralyze them permanently. Fungus diseases are best prevented by early applications; when started one can only hope to check them; Sulphur and Bordeaux are the most effective. A combination of Rotenone-Sulphur controls a multitude of pests. Thorough dusting and spraying, especially beneath the foliage, is half the battle; proper prescription is the other half. **Write us your problem.**

Fertilizers & Soil Builders

Generally speaking, potash element is most beneficial to root crops and nitrogen for leaf or grain crops. As a rule **clayey soils** are well supplied with potassium and deficient in phosphorous, therefore add calcium or phosphorous; **sandy soils** lack potassium and require phosphorous, are alkaline; **peaty soils** are rich in nitrogen and deficient in potassium and phosphorous. Symptoms determining deficient fertility elements: **Lack of Nitrogen:** yellowing of leaves, trees prematurely dropping leaves, plants ripening prematurely; **Excessive Nitrogen:** excessive leaf and stalk growth, imperfect bud development; **Lack of Phosphorous:** when grains and roots are light; **Lack of Potash:** when stalks are weak and brittle. To read fertilizer analysis: 5-8-7 means 5% nitrogen, 8% available phosphoric acid, 7% potash.

3 for \$1.00
6 for \$1.75

You can grow them in your garden. Will flower this Summer. Experiments carried on at the Boyce-Thompson Institute of Plant Research at Yonkers, N. Y., for several years by Dr. Zimmerman and Mr. Hitchcock have proved that they may be wintered over with an eight-inch mulch of leaves.

With their long stems and huge daisy-like blooms, in a wide range of colors—including orangy salmon, deep pinks and reds of exotic hues, that last exceptionally well and are adapted especially for bouquets and arrangements, they are rapidly increasing in universal popularity.

If you have never grown gerberas in your garden, this Special Offer will introduce a new treat and delight in these beautiful, graceful, brilliantly colored treasures.
